Splinterlands is the next generation of collectible card games. It allows players to collect, trade, and battle with provably scarce digital collectibles with real world value.

Every battle is a unique challenge that consists of dynamically created combat rules, a timed team building session, and the battle itself.

Splinterlands combines the collectability and resale value of physical card games with the convenience and speed of a digital game.

Available on PC, Android & iOS
HOW WE USE BLOCKCHAIN

Splinterlands is already achieving what most other blockchain games are still striving to develop. EVERY ACTION in the game is a transaction on the Hive blockchain, which makes everything verifiable and provably fair. This is all achieved with the speed and ease of use that players have come to expect.

Splinterlands is the first strategy card game to provide a seamlessly integrated marketplace that gives the player FULL CONTROL of their cards. These cards are non-fungible tokens (NFT’s) with real monetary value. Players can buy, sell, or trade these digital assets just like physical trading cards!
